

WHAT IS CLAIMED IS:

1. A lollipop stick comprising:

a plastic stick body having a longitudinal receiving cavity formed therein and a fluorescent layer coating on an interior wall thereof, and the plastic stick  
5 body being used for handling;

a breakable airtight tube disposed in the longitudinal receiving cavity and spaces a predetermined distance from the interior wall of the plastic stick body, the breakable airtight tube having a first solution contained therein;

a second solution contained between the plastic stick body and the breakable  
10 airtight tube;

a conjunction structure connects an end of the plastic stick body and being concave-and-convex for combining with esculent sugar cookies;

whereby the breakable airtight tube is fractured while the plastic stick body is bent, the first solution mixed up with the second solution and results into a  
15 chemiluminescence reaction by exciting the fluorescent layer thereof.

2. The lollipop stick claimed as claim 1, wherein the breakable airtight tube is made of glasses.

3. The lollipop stick claimed as claim 1, wherein the conjunction structure has a screwed thread formed on an exterior surface thereof.

20 4. The lollipop stick claimed as claim 1, wherein the conjunction structure has at least one recess formed thereon.

5. The lollipop stick claimed as claim 4, wherein the recess penetrates through the conjunction structure.
